

CrushBox DB-60PRO-E

Hard Drive destroyer for professional use.

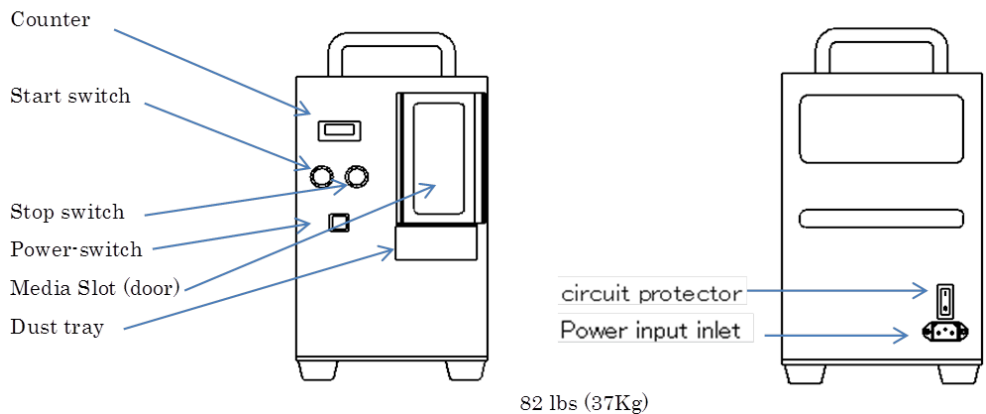

Physical Destruction

The safest and surest way to sanitize a hard drive is to physically destroy it. This is an attractive option if the drive is to be discarded anyway and not reused. One common method is shred or drill four holes through the entire drive. Another approach is to pry the platters apart to the extent that each platter is sufficiently warped or distorted to make it inoperable. It can also be taken to a professional for destruction. Some consumer electronics stores will do this as a courtesy for individual customers worried about what will happen to their old hard drive.

DB-60PRO-E

Part Names

Specification list

HS- Code 8479.82-000

Ambient operating temperature: 5 – 40 °C	Voltage fluctuation: +10%、-10%
Relative humidity: Maximum 80%	Overvoltage Category II according to IEC60664-1
Altitude: Up to 2000m	Pollution Degree 2 according to IEC60664-1
Temperature at transportation and storage: -25 – 55°C	Equipment Weight: 37kg
Electrical Rating: AC200V-AC240V 50/60Hz 5A	Acoustic Noise: 76dB(A) at no load
Low Voltage Directive, 2006/95/EC EMC Directive 2004/108/EC	
Size: 380(H) 220(W)460(D)mm	Cycle Time: 10~15 seconds
Export packing: UT-1 640(H) 380(W)520(L)mm 45Kg	Maintenance/Longevity: 50,000 Cycles

It proves that it manufactured according to this specification.

- Destruction Method: Automated Pressure
 - Application of pressure: 6 ton
 - Operation System: 4 Holes through the Platters
 - MAX # of Continuous Operations: 200 units
 - MAX # of Operations per day: 500 units
- manufactured by Nittoh-horukamu.com.

MODEL:DB-60PRO-HS-E

How Nittoh Crushbox DB-60pro-E HDD Destroyer Works

The series Nittoh Crushbox DB-60pro-E HDD Destroyer works by dismantling the plates. This way, every hard drive item is crushed and destroyed into tiny pieces. It is distorted enough to make it unable to function or operate. The Nittoh Crushbox DB-60pro-E HDD Destroyer is used by companies, organizations, and departments, such as government agencies, private sector and individuals who need to destroy hard drives to keep their confidence data. Sure, they think that this is the best way to stay safe about what will happen to old storage media that is not in use anymore.

Currently, the series of Nittoh Crushbox DB-60pro-E HDD Destroyer has been named as the number 1 best hardware destroyer in Japan and Asia. Besides, it is also highly demanded in other regions in the world. So, what are you waiting for? This crush box is the best solution to protect data leakage on storage media.

Started providing on-site data destruction and recovery services that conform to Japanese Fire Service Law and crush highly confidential storage media to 2mm square or less (US NSA).

DB-OP-60SSD

MODEL:DB-60PRO-HS-E

Generally, Nittoh Crushbox DB-60pro-E HDD Destroyer has some functions related to destroying hard drives as storage media for confidential data. They are as follows.

•Crushing hard drives and SSDs

Do you know a paper destroying machine? Yes, the Nittoh Crushbox DB-60pro-E HDD Destroyer basically has the same function with it. But sure, the machinery components inside are stronger and more powerful by remembering the objects to crush are hard and some of them really thick including hard disk and even mobile and smartpone. Other objects to crush are flashdisk, floppy disk, SSD card, memory card, and other storage media. It can crush and destroy all types of hard drive into pieces without remaining any big components. This way, the data is also completely gone.

•Easy Operation

Even if the product is mostly used by companies and government instructions in which the staff must be capable in IT, Nittoh Crushbox DB-60pro-E HDD Destroyer is designed to be easy to operate. It is to accommodate those who want to use the product personally at home. You only need to turn on the machine first. Next, the objects are put in it. Push the destroying button and only in some seconds, those objects are destroyed.

•Fast Process

•If you think you need to wait for some many hours to see the process done, you are wrong. It needs only around 10 seconds to crush all the hardware. However, the duration may differ based on the type of hardware and how many items to destroy. But overall, they are all very quick with satisfying results. Yes, you can also destroy many hardware items at once.

•In Line with DoD, NSA, and NIST Standard

The machine is designed to meet the standard made by DoD, NSA, and NIST. The standard itself includes in terms of the design, components used, crushing methods, and the results. Using the automatic hydraulic pressure, all the hardware items are crushed well and the data are no longer in this world. Meanwhile, the dimension is 220 x 460 x 380 mm and it is weight at 37 Kg making it compact and ideal to carry anywhere you want.

It's quick easy.

DB-60PRO-E is designed to conform the NSA guideline

DB-60PRO-E has HDD Destruction shafts that can make Four holes & V-shaped.

Make Sure Data Is Gone By Destroying It

Since “deleted” data is still there, how can you be sure that your data doesn't fall into the wrong hands when you get rid of old equipment? The only way to be sure is to physically destroy the drive itself.

It might sound drastic, but the risks of data breaches is much greater.

Media and maximum numbers that can be processed

3.5-inch hard disk (thickness of 1.6 inches = 41 mm or less) ———	1 unit
2.5-inch hard disk _____	1 unit
5-inch MO caddy (cartridge) _____	1 piece
DVD caddy (cartridge) _____	up to 2 pieces
Bare CD/DVD _____	up to 5 pieces
5-inch MO disk _____	up to 2 pieces
3.5-inch MO disk _____	up to 2 pieces
3.5-inch floppy disk _____	up to 5 pieces
Zip disk _____	up to 2 pieces
Cell-phone _____	up to 2 units
1-inch hard disk (optional) _____	up to 4 units
1.8-inch hard disk (optional) _____	up to 2 units
